

# TAA compliant Control Room technology

Manufactured in the U.S. and/or in any of the TAA compliant countries

**Barco's fully TAA-compliant control rooms portfolio consists of the following products:**

- **Barco UniSee LCD video walls portfolio**
- **Barco XT-series LED video walls**
- **Barco rear-projection video walls portfolio**
- **Barco OpSpace operator workspace software**
- **Barco TransForm N networked visualization software and hardware**

## Fully TAA-compliant control room

Barco has been providing visualization and collaboration solutions for the military & government control room market for more than 25 years. The company is fully dedicated to complying with the federal Trade Agreements Act (TAA), which requires that products originate either from the United States or another TAA-compliant country. Barco is also committed to continuously investing and innovating in this industry. Our XT-series of LED video walls, a recent addition to Barco's government portfolio, only proves that we continuously look for the best technologies to suit the needs of military and government applications.

## Unbiased compliance

Barco's TAA compliance approach is to not just rely solely on self-certification, rather, when possible, be vetted by third-party, expert consultants. Instead of simply opting for self-declared TAA compliance, Barco opted for certification by expert consultants, who thoroughly researched the requirements necessary to achieve TAA compliance. They extensively assessed our factories and supply chain to help us meet TAA requirements by following a strict implementation program.

In addition, Barco has been seeking further confirmation by applying for official TAA certification. We are confident that we will achieve TAA certification because the third-party consultants have performed the necessary due diligence from an unbiased position. Barco has fully implemented and complied with the recommendations given by these consultants and consequently also complied with TAA regulations.

## Core technology manufactured in the US/Europe

Barco's control room solutions are not only assembled, but also developed and manufactured in TAA compliant countries. For LED video walls specifically, we can guarantee TAA compliance from signal to display. The processing (Infinipix™) driving our LED video walls – the brains of our solutions – has always been developed and manufactured in-house, in the US and Europe, both of which are TAA compliant. Now, an alternative manufacturing location for the LED tiles has been set-up to reach TAA compliance for the full system. The requested manufacturing modifications by third-party TAA consultants did not have any impact on or changes in the quality of our LED technology.
