

Solution design

Tailoring solutions to your vision
with optimal CAPEX and OPEX

Our solution design teams work with you to capture your current & future business needs, define the vision for your solution and plan how to turn it into reality. Various visualization concepts are suggested, taking into account the ergonomics, technical challenges and network architecture.

We solve:

- Risks of visual discomfort
 - Uncomfortable position of display wall and personal screens
 - Glare on screens from inside and outside lighting
- Stress induced by background noises and in rooms
- Mismatch between different materials and colors used
- Visualization system which is not in line with the business needs

Our deliverables

- Workshop at the customer's site to gather information on the control room area, operator processes and needs
- Ergonomics design based on requirements of the customer:
 - 3D layout drawings of the rooms / 3D CAD walkthrough
 - Collage of materials and colors
 - Recommendations for the console furniture
 - Light plan concept with a list of proposed assortment of luminaries
 - Advise on acoustic optimization of the room
- Integrated system design

Design team:

- Team of interior designers and architectural draftsmen, specialized in control rooms
- Delivering 100+ ergonomic design studies per year
