Training & Documentation

Increasing operational efficiency through qualified training and customized documentation

ENABLE

PROTECT

OPTIMIZE

The complexity of a visualization solution requires adequate training and documentation for your staff. Our qualified trainers will guide you through the system design, installation, operation and troubleshooting with hands-on exercises and provided course materials. Training and system documentation can be customized and translated to meet your specific needs.

Furthermore, the training facilities of Barco University also offer a wealth of courses that will bring the knowledge of your technical staff to a new level. On www.barco.com/Support/Training you can explore all scheduled training sessions.

We solve:

- Sub optimal use of the solution due to lack of system knowledge
- Extra effort needed to provide troubleshooting information to the service team
- Unavailability of as built details when troubleshooting or extending your visualization system
- Lost time looking up system details in the different product manuals.

Our deliverables

Depending on your needs, our training and documentation team can deliver:

- Installation training
- Operator training
- Maintenance training
- As built file
- Custom documentation: translation and customization of our system manuals and training packages

Training and documentation team:

- +40 certified trainers
- Global network of training centers
- On-site training and customized documentation delivered for +700 projects per year
