

CMS Quick Switcher

Barco's CMS software is an advanced control room management suite that simplifies display wall management, makes collaboration efficient, and speeds up decision-making – in and beyond the control room. The CMS Add-ons extend the product's functionality, making the software even more powerful, flexible and easy to use.

Description

CMS Quick Switcher is a software add-on that enables user-friendly and fast layout switching on a Barco display solution or CMS Display Agent.

CMS Quick Switcher is used to load a layout on a particular display, or on multiple displays simultaneously. Additionally, you can use it to control the Barco display wall (on/off, input selection), or to execute command lines by pressing a single key.

Main features

- Connect up to 2 CMS servers at a time
- View all displays and associated layouts of the CMS servers
- Load layout onto the displays
- Execute batch file(s)
- Control the video wall (on/off, input selection) via the BCM server
- Define keys with dedicated action(s)
- Provide criteria to filter display(s) and hide from the operator
- Multi-language support on request
- Configure from 1 up to an unlimited number of buttons to be displayed

Benefits

- User interface automatically slides down from the top of the screen when needed – so it doesn't occupy any desktop space when not needed
- Control the screen content through a single button click
- Control the video wall inputs or power status from the same user interface
- Link execution of other applications (e.g. scripts) to the same button click
- Control displays connected to multiple CMS servers (currently supports up to 2 servers)
- Easy configuration through drag-and-drop
- Ability to lock out the configuration tool to prevent operators from making changes to the configuration

Deliverables

- CMS Quick Switcher installer software
- CMS Quick Switcher manual

Restrictions

- CQS does not provide feedback on the layout that is currently loaded.
- JAVA JRE required (same as for other CMS clients)
