

CMS Scheduler

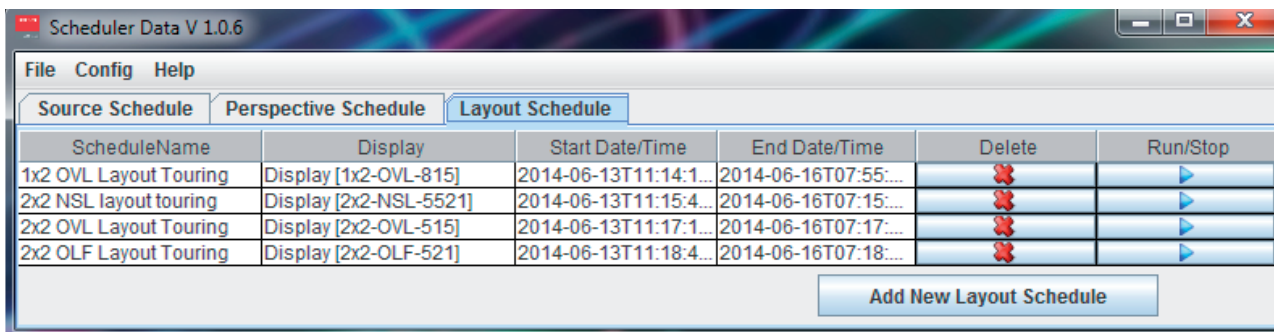

Barco's CMS software is an advanced control room management suite that simplifies display wall management, makes collaboration efficient, and speeds up decision-making – in and beyond the control room. The CMS Add-ons extend the product's functionality, making the software even more powerful, flexible and easy to use.

Description

CMS Scheduler is a simple to use application that schedules sequences of sources, perspectives or layouts on a CMS Display.

- **Source scheduling:** Define a list of sources with associated dwell time per source and assign this list to a tile in a CMS Perspective.
- **Perspective scheduling:** Define a list of perspectives with associated dwell time per perspective and assign this list to a tile on a CMS Display.
- **Layout scheduling:** Define a list of layouts with associated dwell time per layout for a CMS Display.

Schedules can be manually enabled (Start/Stop) and will run between the defined start and stop moments.

The screenshot shows the 'Scheduler Data V 1.0.6' application window. It has a menu bar with 'File', 'Config', and 'Help'. Below the menu bar are three tabs: 'Source Schedule', 'Perspective Schedule', and 'Layout Schedule'. The 'Layout Schedule' tab is active, displaying a table with the following data:

ScheduleName	Display	Start Date/Time	End Date/Time	Delete	Run/Stop
1x2 OVL Layout Touring	Display [1x2-OVL-815]	2014-06-13T11:14:1...	2014-06-16T07:55:...		
2x2 NSL layout touring	Display [2x2-NSL-5521]	2014-06-13T11:15:4...	2014-06-16T07:15:...		
2x2 OVL Layout Touring	Display [2x2-OVL-515]	2014-06-13T11:17:1...	2014-06-16T07:17:...		
2x2 OLF Layout Touring	Display [2x2-OLF-521]	2014-06-13T11:18:4...	2014-06-16T07:18:...		

At the bottom of the window, there is a button labeled 'Add New Layout Schedule'.

Benefits

- Simple to use interface
- Automatic control of the video wall content based on pre-defined scenarios
- Schedule any type of CMS object: Source, Perspective or Layout

Deliverables

- CMS Scheduler installer software
- CMS Scheduler manual

Restrictions

- JAVA JRE required (same as for other CMS clients)
- CMS Scheduler does not provide seamless switching (can be implemented upon request)
