

5 reasons to consider G60

1.

With options to choose between 3 different brightness levels (7K, 8K or 10K lumens); the G60 is an affordable yet qualitative entry-level device. This DLP projector delivers all content – even 3D – with the sharpest details, **Rec. 709 colors** and great contrast!.

2.

With a maximum noise level of **only 36dB** and a compact form factor, our black or white G60 unit blend in perfectly in your architecture. And our fully interchangeable lens range – **from 0.38:1 UST to 5.5:1 long throw** – offers ultimate installation flexibility even in the most compact set-ups..

3.

We set the ambition to lower (y)our environmental footprint. The G60 is an **eco-friendly choice** with a low power stand-by mode of only 0.5W to reduce your power consumption.

4.

Giving the support you want, when you really need it. The G60 series has **3 years standard warranty*** giving you access to a pool of G60 swap units with comparable lifetimes. The **EssentialCare** contract allows you to extend this single swap approach up to 5 years.

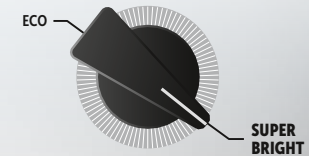

EssentialCare

** or 20.000 hours, whichever comes first.*

5.

We communicate **real specs**, not sugar-coated marketing specs! For example, when Barco specifies 20.000 hours, we mean 20.000 hours at full power down to 50% of the original brightness, not when using some reduced operating mode.
