

The 5 benefits of combining PDS-4K with an LED wall

1.

One switcher driving up to 4 LED walls

Drive 2x UHD@60 or up to 4x UHD@30 / HD@60 LED walls with the same content, or even with different or resized content, with just one PDS-4K.

2.

Customized multi-content switching

Connect multiple content vehicles in the simplest way and create customized windows with backgrounds, layers and up to two PiPs. Scaling content to match the resolution to your LED wall was never easier.

3.

No empty screens, never a black wall

Benefit from the automatic fall-over which switches to other live content or a back-up still store when no sync is detected.

4.

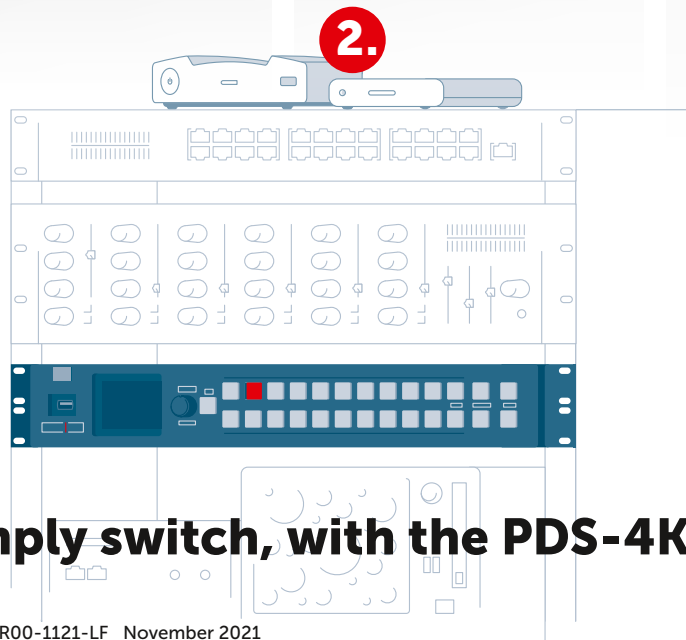

Synchronized audio AND video

Manage both digital audio and video channels with one single device and ensure perfect synchronization thanks to the Dante-enabling audio option card.

5.

Easy enough for presenters to become operators

Preconfigure content, sizing and lay-outs recall them with just one simple press on the front buttons or a compatible device. The PDS-4K is simple enough to use without a professional operator.

Simply switch, with the PDS-4K!
