

Barco Demetra Skin Imaging System

Barco Demetra is the next generation of skin imaging, using advanced digital technology through its intuitive platform to improve diagnostic confidence in skin exams. Hear what your colleagues around the world are saying about Demetra:

Demetra helps better inform your diagnoses:

Achieve better informed diagnoses with high quality digital dermoscopic imaging directly at the point of care.

// Demetra has a brilliant design which gives me the information I need straight away and is easy to operate. The level of detail you get from features like skin parameter maps are fantastic for analytical diagnostic procedures when it comes to the evaluation of basalioma and pink lesions."

Dr. med. Virag Löser-Vincze

Demetra enables your care teams:

Expand the role of physician extenders to support on dermoscopic screening with an intuitive device and workflow that creates consistent, high-quality imaging to aid in diagnosis.

// Because of the standardized way of working with Demetra, nurse-assistants can acquire images and help to follow-up patients, so we can see more patients and provide better care." *Dr. Dirk Heylen*

Demetra improves patient satisfaction:

Share imaging directly with the patient in real-time, educating them on their condition and improving patient engagement.

// Patients are particularly appreciative of the Demetra image. It is important that patients understand what they are looking for and what kind of changes warrant investigation or further evaluation and Demetra is very helpful in this. You can show the image to the patient in a convenient, fast way. The lesion becomes very visible to the patient on the large screen." *Dr. Maral Skelsey*

Demetra expands services beyond your practice:

Connect dermatologic services across your practices and care network via Demetra's secure, GDPR- and HIPPA-compliant cloud-based system.

// With Demetra, we have seen a big impact on how we perform Dermoscopy and manage patients across our practices. We are able to take dermoscopic images of a patient at any of our locations and provide immediate parallel access to all data sets and reports across the organization. ...Overall, this has allowed us to significantly improve our efficiency." *Dr. Julia Märker-Strömer*
